

MINI-SWITCH for 1-inch. Handlebar

Assemblies of a tiny switch for turn signal and horn. Along with an internal throttle kit, it makes the appearance around steering device look sharp. Four types of housing, two types of toggles, manual / automatic switches (using spring return) for turn signal lights are available.

■Characteristic: The housing is very tiny in 41mm by 18mm.

Black Coated Lever (Toggle Switch)

Flat Bar Lever (Toggle Switch)

The most basic type machined from billet aluminum.

Bottom of this product. It may be required to put a part of the switch unit into the inside of a handle pipe.

Matches classical-looking custom building.

Two different looks for both manual and automatic type.

※ Automatic-cancel is not electrical function, but it works by releasing fingers from the toggle.
 ※ Only one type for homing button (push button) is available.

1 Hole MINI SWITCH for 1-inch. Handlebar

The switch bracket considers the size with other combination parts such as the Brake & clutch levers. It is designed to become small as much as possible, and the custom around a simple handle bar. One hall type of the mini switch with a lot of demands.

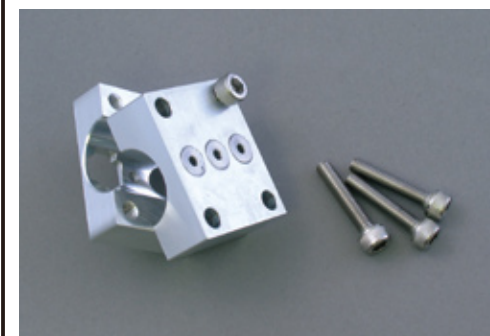

For Turn Signal or horn for 1 inch handle bar.

It produces it with beginning cut everything down, and the switch bracket is finish and a switch of the switch bracket.

■Characteristic: The housing is very tiny in 28mm by 19mm. No switch smaller than this is available

Drilling JIG BLOCK for 1-inch MINI-SWITCH

Drill jig for mini-switch. It drills a pilot hole 3mm diameter for M4 fixing screws of a switch housing. The half side of this block can put marking-off for a toggle switch and a push button switch. The width of this block is 41mm and the same as the width of the switch housing. So, you can drill holes while checking the mounting location.
